Art Unit: 3742

***Claim Rejections - 35 USC § 102***

Claims 1-6, 8-10, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by US Pat. 6943321.

Referring to Figs. 1 & 2, and col. 12, line 65, through col. 13, line 16, US'321 discloses the invention as claimed including two adjacent fans which are disclosed to co-rotate or contra-rotate, combinations of these modes, and periodic reversals of fan direction.

***Claim Rejections - 35 USC § 103***

Claims 7, 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'321.

The claims differ from US'321 only in calling for the fans to be arranged vertically one above the other, equal duration of co-rotating and contra-rotating phases. However, these limitations do not patentably distinguish the invention from the prior art. It would have been obvious to arrange the fans vertically strictly in accord with the size and kind of oven being used, i.e., with the kind of food support structure placed in the oven, and to utilize equal duration of co-rotating and contra-rotating phases since US'321 already discloses "periodic" reversals (which implies equal "periods"), and heating uniformity urges that the co-rotating and contra-rotating modes be equal in duration, it would have been obvious to so operate the oven of US'321.

***Allowable Subject Matter***

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
